

# The Succulent Garden

The Royal Botanic Garden Sydney is creating a fun, educational website for their newly-improved succulent garden. They want to feature interactive illustrations and information about the different species of succulents that live within the gardens, to attract more visitors and provide interesting facts about the much-loved plants from around the world.

Using the illustrations and copy provided, build a one-page website that features fun SVG animations that play on hover, as well as revealing/hiding the copy.

The trick here is to isolate specific SVG paths within the illustrations to animate. If you get stuck, check out the website: [www.superhi.succulentgarden.com](http://www.superhi.succulentgarden.com)

Also, feel free to experiment and make it your own! We'd love to see what you come up with!
